To the AI & Data team leads

Subject: Application — AI, Machine Learning & MLOps Engineering (permanent, fixed-term or work-study)

Dear Hiring Manager,

A few months ago I had a slightly crazy idea: to build an agent that would look for opportunities on my behalf, write personalized applications and sort the replies while I sleep. I did it. And while building it, I realized that what excites me is not only AI, but everything that sits behind it: the backend, code that holds up, a system that runs on its own without anyone having to touch it.

That is exactly what I want to do with you: solid engineering, in the service of AI. I am currently in the **Master 1 MLSD** (Machine Learning for Data Science) at **Université Paris Cité**, and I am looking for the company where I can put all of this into practice — on a permanent, fixed-term or work-study contract, in the Paris region or remotely.

I have just finished an AI & MLOps engineering internship at **GE HealthCare**, where I built a **RAG agent** that answers in seconds questions that used to take hours of searching through documentation. I first coded everything myself, from data cleaning all the way to the end of the pipeline. It worked, but it burned far too many tokens — so I re-architected it as a **multi-agent system** on **Microsoft Copilot Studio**, keeping my own preprocessing upstream. Better answers, faster, at a cost that holds. That is where I really grasped the difference between a prototype that works and something you actually ship to production.

And it is not a one-off: I have trained robotic agents with a real MLOps pipeline (**LeRobot**), built a fully automated **multi-platform content engine** on n8n and AWS (**YouTube, TikTok, Instagram, Facebook**), and published a research article on Hugging Face. Every time, the same approach: write clean code, then let the AI solve the real problem. On the academic side, I am **top of my class** in my computer science degree, after two years of AI preparatory classes at ENSIA (Algiers, taught in English); and I also enjoy carrying a team with me — I was Tech Lead at the latest Avignon AI hackathon.

I do not claim to know everything, but I learn fast, I see things through, and I give everything to what I do. If my profile speaks to you, I would love to talk it over with you.

Thank you for considering my application. I look forward to hearing from you.
